

MODULUS

Field Wiring Panel FWP4-1120MA

Modulus Field Wiring Panels simplify and expedite the wiring of electrical enclosures with Modulus I/O modules. The FWP4-1120MA is designed for use with loop powered 20mA sensors and Modulus 1120mA communications modules. The wiring panel takes the signals from the I/O module and provides pairs of terminals for "landing" wiring from field devices, eliminating most manual wiring.

The Field Wiring Panel is supplied with a pre-wired cable to 5-pin module I/O plug. Standard cable lengths are 1, 2, and 3 feet. Other lengths are available with short lead times.

Laser printable waterproof polyester labels are available to further simplify and accelerate panel wiring. Create labels with various colors, fonts and styles using a standard laser printer. Replicate labels quickly and easily. A Microsoft Word template is offered at no additional cost to enter and print label information.

Modulus FWP4-1120MA Field Wiring Panel

- PROVIDES TERMINATION POINTS FOR 4 DEVICES
- ELIMINATES MOST MANUAL PANEL WIRING—PLUG-N-PLAY CABLES
- FAST SNAP-ON DIN RAIL MOUNTING
- RAPID LABELING W / PRE-CUT WATERPROOF LASER PRINTER LABELS

Comm 1120MA device wiring

- 1 DI sensor switches to ground
- 1 DO sources to grounded device
- 2 AIs are 20mA (loop powered)
